

Special orders

Along with the easyGUI software system, we also offer several different individually tailored services. These services are not available in our web shop. If you are interested in any of the below services, or need further information, please contact us directly at sales@ibissolutions.com

New easyGUI functionality

Much functionality in easyGUI has been created based on specific customer requests. If you have an idea for some functionality currently not found in easyGUI let us know, and we can then discuss the idea in detail. The process usually follows these guidelines:

1. The idea is discussed, and we estimate if it is possible to implement the desired functionality in a way so that it will become a natural part of the easyGUI system. We usually do not make special versions of easyGUI, so the functionality must have some common relevance.
2. We, IBIS Solutions ApS, prepare a detailed offer, stating functionality, price, and delivery terms (beta Delivery and final delivery).
3. If the offer is accepted implementation starts.
4. One or more beta releases are delivered to the customer, for testing and acceptance purposes.
5. When both parts are satisfied a final delivery is made.

Company: IBIS Solutions ApS. Torvevangen 24, DK-4550 Asnaes, Denmark. Phone: +45 7022 0495 Fax: +45 7023 0495

6. The functionality will become part of the easyGUI package in the next major release.

As there is an advantage both for the customer (quick access to precisely the desired functionality) and IBIS Solutions ApS (more functionality in the product) the price is set lower than necessary to cover the development costs.

We implement special order on all levels, from very small changes to major components. As an example Unicode support was added in this way.

Consultancy services

Among other things, we offer development of embedded applications, partially or fully. Assisting with a more efficient use of the easyGUI application. Development of easyGUI PC simulator projects, from simple to fully fledged simulators, including hardware simulation. Full development and design of PC applications.

Among our services are:

Development of PC and embedded software, partially or fully.

We develop both technical applications for the industry, and applications for commercial products.

Database applications – we have extensive experience in SQL database applications.

Font development and design for embedded systems.

Multilingual applications.

Efficient use of the easyGUI graphical user interface tool for embedded systems.

easyGUI PC simulator projects, from simple to fully fledged simulators, including hardware simulation.

Fonts

easyGUI Unicode can handle two types of character encoding: ANSI and Unicode. Both are standards widely used in the IT world. The Unicode package is the only package able to work with the Unicode standard, the Color and Monochrome version, supports ANSI character encoding only.

ANSI as used by easyGUI covers 224 characters from code 32 to 255. The encoding is the same as used by Microsoft Windows, making text entry easy. Most Western languages are covered by this character set, as both standard characters and some special national characters are included. Each ANSI character takes up 1 byte.

Currently the following languages are supported:

- Western languages (ANSI character set)
- Polish
- Greek
- Cyrillic (Russia)
- Hebrew (Israel)
- Arab
- Thai
- Hangul (Korea, about 12.000 characters)
- Simplified and traditional Chinese (about 20.000 characters)
- Hiragana (Japan)
- Katakana (Japan)
- Kanji (Japan)

Special orders

Much functionality in easyGUI has been created based on specific customer requests. If you have a need for a new feature or functionality currently not found in easyGUI let us know, we look at your request, discuss it with you in detail. Evaluate if it is possible to implement the desired functionality. We can then offer you a detailed quote, stating functionality, price, and delivery terms (beta delivery and final delivery date).

If at all possible, the new function will become a part of the next easyGUI release. This is how many of the functions in easyGUI was developed. The functions we prefer to develop must therefore have some relevance to the easyGUI application, and also be useful to other developers using our software. The development price, will of course reflect this.

Prices and availability is agreed upon individually for each order, depending on purpose, extent, etc.
